

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

DOCUMENTS
DEPT.

VACANT PUBLIC LANDS IN THE UNITED STATES.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
July 1, 1908.

The following tables, based on reports furnished by the district land offices, show, by States, Territories, land districts, and counties, the area of unappropriated and unreserved public lands, surveyed and unsurveyed, and a brief description of the character of the vacant lands. No more specific description of the character of the land, climate, water, or timber can be given by the General Land Office. Counties and States in which there are no unappropriated lands are omitted.

A township diagram, showing only entered lands in any township, can be procured by sending \$1 to the register and receiver of the land office for that district. The diagram required should be specified by township and range number.

While the figures in the tables may not be absolutely correct, owing to liability to error in a work of such magnitude and to the necessity of making estimates of unsurveyed lands, it is believed that they afford a close approximation to the actual areas. The statement is intended to inform correspondents and the general public as to whether there is much or little public land in the several land States and Territories and the land districts therein and in particular counties or localities.

Before entry personal inspection of the lands should be made to ascertain if they are suitable, and when the applicant is satisfied on this point entry can be made at the local land office in the manner prescribed by law, under the direction of the local land officers, who will give full information. Should anyone desire information in regard to vacant lands in any district before going there for a personal inspection, he should address the register and receiver of the proper local land office, who will give full information regarding vacant lands and the steps necessary to be taken in making entry.

All vacant unappropriated public lands, nonmineral and nonsaline in character, are subject to entry under the homestead laws.

4 UNAPPROPRIATED PUBLIC LANDS OF UNITED STATES.

Statement by States, Territories, land districts, and counties, showing the area of land unappropriated and unreserved on July 1, 1908. Counties containing no unappropriated lands are omitted.

ALABAMA.

Land district and county.	Area unappropriated and unreserved.			Brief description of character of unappropriated and unreserved land.

PARTMENT OF THE INTERIOR :: GENERAL LAND OFFICE

THE UNAPPROPRIATED PUBLIC LANDS OF THE UNITED STATES

BY COUNTIES, LAND DISTRICTS
AND STATES, ON JULY 1, 1909

WASHINGTON : : GOVERNMENT PRINTING OFFICE : : 1909

Bureau of Land Management

PUBLIC LANDS IN THE UNITED STATES.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
July 1, 1909.

Following tables, based on reports furnished by the district registers, show, by States, Territories, land districts, and counties, the number of unappropriated and unreserved public lands, surveyed and reserved, and a brief description of the character of the vacant lands. No more specific description of the character of the land, whether water, or timber can be given by the General Land Office. The States and Territories in which there are no unappropriated lands are

shown in the township diagram, showing only entered lands in any township, required by sending \$1 to the register and receiver of the land in that district. The diagram required should be specified by township and range number.

As the figures in the tables may not be absolutely correct, owing to error in a work of such magnitude and to the necessity of making estimates of unsurveyed lands, it is believed that they give a close approximation to the actual areas. The statement is intended to inform correspondents and the general public as to the amount of public land in the several States and Territories and the land districts therein and in particular localities.

For entry personal inspection of the lands should be made to determine if they are suitable, and when the applicant is satisfied on that entry can be made at the local land office in the manner required by law, under the direction of the local land officers, who will give full information. Should anyone desire information in regard to vacant lands in any district before going there for a personal inspection, he should address the register and receiver of the local land office, who will give full information regarding the lands and the steps necessary to be taken in making entry. Unappropriated public lands, nonmineral and nonsaline lands, are subject to entry under the homestead laws.

Statement by States, Territories, land districts, and counties, showing the area of unappropriated and unreserved on July 1, 1909. Counties containing no unappropriated lands are omitted.

* The unreserved lands in Alaska are mostly unsurveyed and unappropriated.

1

Bureau of Land Management

VACANT PUBLIC LANDS IN THE UNITED STATES.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
July 1, 1910.

The following tables, based on reports furnished by the district land offices, show, by States, Territories, land districts, and counties, the area of unappropriated and unreserved public lands, surveyed and unsurveyed, and a brief description of the character of the vacant lands. No more specific description of the character of the land, climate, water, or timber can be given by the General Land Office. Counties and States in which there are no unappropriated lands are omitted.

A township diagram, showing only entered lands in any township, can be procured by sending \$1 to the register and receiver of the land office for that district. The diagram required should be specified by township and range number.

While the figures in the tables may not be absolutely correct, owing to liability to error in a work of such magnitude and to the necessity of making estimates of unsurveyed lands, it is believed that they afford a close approximation to the actual areas. The statement is intended to inform correspondents and the general public as to whether there is much or little public land in the several land States and Territories and the land districts therein and in particular counties or localities.

In many counties only a few acres are reported as vacant. Neither the General Land Office nor the local land officers can furnish information as to the location of such tracts, but such information may be obtained from the records of the local land offices, which, when not in official use, are open to inspection by prospective home seekers or their agents.

Before entry personal inspection of the lands should be made to ascertain if they are suitable, and when the applicant is satisfied on this point entry can be made at the local land office in the manner prescribed by law, under the direction of the local land officers, who will give full information. Should anyone desire information in regard to vacant lands in any district before going there for a personal inspection, he should address the register and receiver of the proper local land office, who will give full information regarding vacant lands and the steps necessary to be taken in making entry.

All vacant unappropriated public lands, nonmineral and nonsaline in character, are subject to entry under the homestead laws.

Statement, by States, Territories, land districts, and counties, showing the area of unappropriated and unreserved on July 1, 1910. Counties containing no unappropriated lands are omitted.
